

Garage wall construction

(Withdrawn – January 2024)

The Technical Guidance Notes are produced by NHBC as guidance solely for our builder customers as to how to interpret the technical requirements in relation to the warranty cover provided by NHBC under its Buildmark, Buildmark Choice, Buildmark Link, Buildmark Solo, Buildmark Connect or any similar product from time to time. It has not been created or intended for distribution or use outside of that purpose. The information contained in this Technical Guidance Note does not constitute advice and is not to be relied upon by any third party. Nothing in this Technical Guidance Note is intended to, nor should it be taken to, create any legal or contractual relationship. Any third party who chooses to rely upon the information contained in the Technical Guidance Notes shall do so entirely at their own risk and NHBC accepts no duty of care or liability, however caused, in connection with its use or reliance by any third party.

Question

For garage walls of cavity construction, is a cavity less than 50mm wide acceptable?

Considerations

- NHBC Standards clause 6.1.6 states all external masonry cavity walls should be constructed with at least a 50mm nominal clear cavity. This is to allow sufficient room to construct the wall and reduce the possibility of mortar bridging.
- NHBC Standards clause 10.1.5 accepts garage walls constructed with a single leaf of brickwork or blockwork 100mm thick but says such walls will not be impervious to wind-driven rain and consequently could become damp. It also says 'In areas of severe exposure, single leaf walls may require a high standard of workmanship and possibly surface treatment to prevent an unacceptable level of rain penetration'.

Answer

On the basis that NHBC Standards allow garage walls of solid brickwork or blockwork 100mm thick, for garage walls of cavity construction a cavity of less than 50mm is acceptable.
