

Lintels within coastal sites

(March 2024) (Second issue – supersedes April 2011)

The Technical Guidance Notes are produced by NHBC as guidance solely for our builder customers as to how to interpret the technical requirements in relation to the warranty cover provided by NHBC under its Buildmark, Buildmark Choice, Buildmark Link, Buildmark Solo, Buildmark Connect or any similar product from time to time. It has not been created or intended for distribution or use outside of that purpose. The information contained in this Technical Guidance Note does not constitute advice and is not to be relied upon by any third party. Nothing in this Technical Guidance Note is intended to, nor should it be taken to, create any legal or contractual relationship. Any third party who chooses to rely upon the information contained in the Technical Guidance Notes shall do so entirely at their own risk and NHBC accepts no duty of care or liability, however caused, in connection with its use or reliance by any third party.

Question

What is considered a coastal site where lintels should be austenitic stainless steel?

Considerations

- NHBC Standards 6.1.12 states that lintels used in aggressive environments e.g. coastal sites, should be austenitic stainless steel.
- *PD 6697 Recommendations Design of Masonry Structures* states that in aggressive environments, such as coastal sites, products in both leaves of an external wall should be austenitic stainless steel.

Answer

Experience has shown that metal components, including galvanised lintels, within areas subjected to regular wetting with salt laden air, are at greatest risk of corrosion.

When specifying metal lintels the term 'Coastal site' should include those sites within 500 metres of the shoreline.
