

Use of flexible ducting to connect SVP

(November 2024) (Second issue – supersedes December 2008)

The Technical Guidance Notes are produced by NHBC as guidance solely for our builder customers as to how to interpret the technical requirements in relation to the warranty cover provided by NHBC under its Buildmark, Buildmark Choice, Buildmark Link, Buildmark Solo, Buildmark Connect or any similar product from time to time. It has not been created or intended for distribution or use outside of that purpose. The information contained in this Technical Guidance Note does not constitute advice and is not to be relied upon by any third party. Nothing in this Technical Guidance Note is intended to, nor should it be taken to, create any legal or contractual relationship. Any third party who chooses to rely upon the information contained in the Technical Guidance Notes shall do so entirely at their own risk and NHBC accepts no duty of care or liability, however caused, in connection with its use or reliance by any third party.

Question

Can flexible ducting (of the type used for extract ventilation) be used to connect between the soil and vent pipe and ventilation tile?

Considerations

- The soil and vent pipe should be terminated close enough to the vent tile to use the pipe supplied with the ventilation tile without extension.
- Flexible ducting (of the type used for extract ventilation) may not be sufficiently durable for this use.
- It may be difficult to achieve an air-tight joint at the ends of the flexible duct.

Answer

Flexible ducting (of the type used for extract ventilation) is not suitable for this purpose. Where necessary, the soil and vent pipe should be extended using rigid plastic fittings.
