

# Profiles for access steps

(December 2008) (First issue)

## Question

Are paving slabs with square edges acceptable for steps constructed to comply with the details in Approved Document M (E&W), Technical Handbook – Domestic section 4 (Scotland) and Part R (NI)?

## Considerations

- The details show treads with a rounded arris.
- They are intended to show tread profiles that do not present a danger for those using crutches and callipers.

## Answer

Paving slabs with square edges are acceptable. They should not project beyond the front of the riser.
