

# Gaps around timber windows and timber door frames

(Withdrawn - January 2024)

The Technical Guidance Notes are produced by NHBC as guidance solely for our builder customers as to how to interpret the technical requirements in relation to the warranty cover provided by NHBC under its Buildmark, Buildmark Choice, Buildmark Link, Buildmark Solo, Buildmark Connect or any similar product from time to time. It has not been created or intended for distribution or use outside of that purpose. The information contained in this Technical Guidance Note does not constitute advice and is not to be relied upon by any third party. Nothing in this Technical Guidance Note is intended to, nor should it be taken to, create any legal or contractual relationship. Any third party who chooses to rely upon the information contained in the Technical Guidance Notes shall do so entirely at their own risk and NHBC accepts no duty of care or liability, however caused, in connection with its use or reliance by any third party.

## Question

When installing a timber window or timber door frame what is the recommended gap for the sealant between the frame and masonry?

## Considerations

- BS 8213 : Part 4 'Windows, doors and rooflights' gives guidance on installing timber windows.
- An effective seal around frames should improve weatherproofing and airtightness.

## Answer

Timber windows and door frames can be installed abutting masonry. Where a gap is provided it should not exceed 10mm.

When the gap is less than 5mm the sealant should cover both the frame and the surrounding masonry by 6mm. When the gap is greater than 5mm a backing strip should be used behind the sealant and the sealant should have a depth of at least 6mm.
